TABLE OF CONTENTS

MORTALITY	3
Deaths and rates, 2010-2014 (<i>U.S., Idaho, districts, counties</i>).....	6
2014 Deaths: age at death (<i>Idaho, districts, counties</i>).....	7
2014 Deaths: sex and race/ethnicity (<i>Idaho, districts, counties</i>)	8
2014 Deaths: ten leading causes, percent of deaths, crude rates and age-adjusted rates (<i>U.S., Idaho</i>).....	9
2014 Deaths: ten leading causes by sex, percent of deaths, crude rates and age-adjusted rates (<i>U.S., Idaho</i>)	10
2014 Deaths: ten leading causes by age group (total)	11
2014 Deaths: ten leading causes by age group (males).....	12
2014 Deaths: ten leading causes by age group (females).....	13
2014 Deaths: ten leading causes of premature deaths, total and by sex, based on years of potential life lost before age 75	14
2014 Deaths: life expectancy, by sex (<i>Idaho, districts</i>).....	15
2014 Deaths: malignant neoplasms by leading site of cancer (<i>Idaho, districts, counties</i>).....	16
2014 Deaths: malignant neoplasms by leading site of cancer by sex (<i>Idaho, districts, counties</i>)...	17
2014 Deaths: primary site of malignant neoplasms by sex	18
2014 Deaths: selected causes (<i>Idaho, districts, counties</i>).....	20
2014 Deaths: 113 selected causes by age	22
2014 Deaths: accidental deaths by age	33
2014 Deaths: accidental deaths by place of injury and accident type	38
2014 Deaths: work injury deaths occurring in Idaho by manner, sex and age.....	39
2014 Deaths: accidental work injury deaths occurring in Idaho by industry and place of injury	39
2014 Deaths: firearm injury, alcohol-induced, and drug-induced deaths (<i>U.S., Idaho, districts</i>) by age, sex, and manner (<i>Idaho</i>) and years of potential life lost before age 75.....	40
2014 Deaths: disposition method (<i>Idaho, districts, counties</i>).....	41
<i>Infant, fetal, and maternal mortality</i>	42
Infant deaths and rates, 2010-2014 (<i>U.S., Idaho, districts, counties</i>).....	45
2014 Infant deaths: sex and race/ethnicity (<i>Idaho, districts, counties</i>)	46
2014 Infant deaths: causes of death, neonatal and postneonatal	47
2014 Infant deaths and rates: age of mother	47
2012-2014 Infant deaths: causes of death (<i>Idaho, districts, counties</i>)	48
2014 Infant deaths: neonatal, postneonatal (<i>U.S., Idaho, districts, counties</i>)	49
Infant mortality: three-year rates, 2003-2005 through 2012-2014 (<i>Idaho, districts, counties</i>).....	50
Stillbirths and ratios, 2010-2014 (<i>Idaho, districts, counties</i>).....	51
Perinatal deaths and ratios, 2010-2014 (<i>Idaho, districts, counties</i>).....	52

Information on this section

MORTALITY

U.S. and Idaho

The number of Idaho resident deaths increased 1.5 percent from 12,426 in 2013 to 12,610 in 2014. At the same time, the death rate remained the same at 7.7 deaths per 1,000 population. There were 2,626,418 deaths in the United States in 2014 compared with 2,596,993 in 2013. The 2014 U.S. crude death rate was 8.2 deaths per 1,000 population, which was no change from 2013¹.

U.S. and Idaho Cause of Death Ranking

The ten leading causes of death in U.S in 2014 were the same as the leading causes in Idaho in 2014, with the exception of a few causes. Chronic liver disease and cirrhosis was ranked 10th in Idaho with an age-adjusted rate (AAR) of 10.9 per 100,000 population in 2014, and was ranked 12th in U.S. in 2014 with a rate of 10.4. Nephritis, nephrotic syndrome and nephrosis was ranked 9th in U.S. in 2014 with an AAR of 13.2, and was ranked 13th in Idaho with an AAR of 8.0.

<u>Causes Ranked 1-10 in Idaho</u>	<u>Age-Adjusted Rate</u>	
	<u>Idaho 2014</u>	<u>U.S. 2014 (Rank)</u>
1. Malignant neoplasms (cancer)	155.1	161.2 (2)
2. Diseases of heart	153.4	167.0 (1)
3. Chronic lower respiratory diseases	46.4	40.5 (3)
4. Accidents (unintentional injuries)	45.5	40.5 (3)
5. Cerebrovascular diseases (stroke)	36.8	36.5 (5)
6. Diabetes mellitus	22.9	20.9 (7)
7. Alzheimer's disease	22.4	25.4 (6)
8. Intentional self-harm (suicide)	20.0	13.0 (10)
9. Influenza and pneumonia	11.5	15.1 (8)
10. Chronic liver disease and cirrhosis	10.9	10.4 (12)

Age-adjusted rates are per 100,000 population.

U.S. mortality rates are consistently much higher than those in Idaho for Diseases of heart, Malignant neoplasms, Alzheimer's disease, Nephritis, nephrotic syndrome and nephrosis, and Influenza and pneumonia. Higher Idaho rates are recorded for Chronic lower respiratory disease, Intentional self-harm (suicide), Chronic liver disease and cirrhosis, Cerebrovascular diseases (stroke), Diabetes mellitus, and Accidents (unintentional injury).

Changes in Cause-of-Death Ranking for Ten leading causes in Idaho from 2013 to 2014

There were no changes in the top ten leading causes of death to Idahoans.

Changes in Idaho Age- Adjusted Rates²

There was one significant change in the age-adjusted death rate among the ten leading causes of death from 2013 to 2014. The age-adjusted rate for Influenza and Pneumonia decreased significantly from 15.1 deaths per 100,000 in 2013 (total of 259 deaths) to 11.5 deaths per 100,000 in 2014 (total of 203 deaths).

Changes in Idaho Age-Adjusted Rates²

Age-adjusted rates were higher, but not significantly higher, in 2014 than in 2013 for:

<u>Cause</u>	<u>2013 Age-Adjusted Rate</u>	<u>2014 Age-Adjusted Rate</u>
• Diseases of heart	145.0	153.4
• Cerebrovascular diseases	35.5	36.8
• Alzheimer's disease	21.0	22.4
• Intentional self-harm (suicide)	19.2	20.0

There were no significant declines in age-adjusted rates, but were lower in 2014 than in 2013 for:

<u>Cause</u>	<u>2013 Age-Adjusted Rate</u>	<u>2014 Age-Adjusted Rate</u>
• Malignant neoplasms (cancer)	156.3	155.1
• Chronic lower respiratory diseases	46.5	46.4
• Accidents (unintentional injuries)	47.7	45.5
• Diabetes mellitus	23.5	22.9
• Chronic liver disease and cirrhosis	11.9	10.9

Deaths to Idaho Males and Females

The leading cause of death for both males and females was Malignant neoplasms (cancer) in 2014. Age-adjusted rates for males were significantly higher² than age-adjusted rates for females for five of the ten leading causes of death among males:

<u>Cause</u>	<u>Male Age-Adjusted Rate</u>	<u>Female Age-Adjusted Rate</u>	<u>Male to Female Ratio</u>
• Malignant neoplasms (cancer)	182.6	133.8	1.4
• Diseases of heart	190.2	121.9	1.6
• Accidents (unintentional injuries)	57.6	34.1	1.7
• Intentional self-harm (suicide)	30.4	10.1	3.0
• Chronic liver disease and cirrhosis	15.1	6.9	2.2

For females, the age-adjusted rate for Alzheimer's disease was significantly higher² than for males:

<u>Cause</u>	<u>Female Age-Adjusted Rate</u>	<u>Male Age-Adjusted Rate</u>	<u>Female to Male Ratio</u>
• Alzheimer's disease	26.9	16.0	1.7

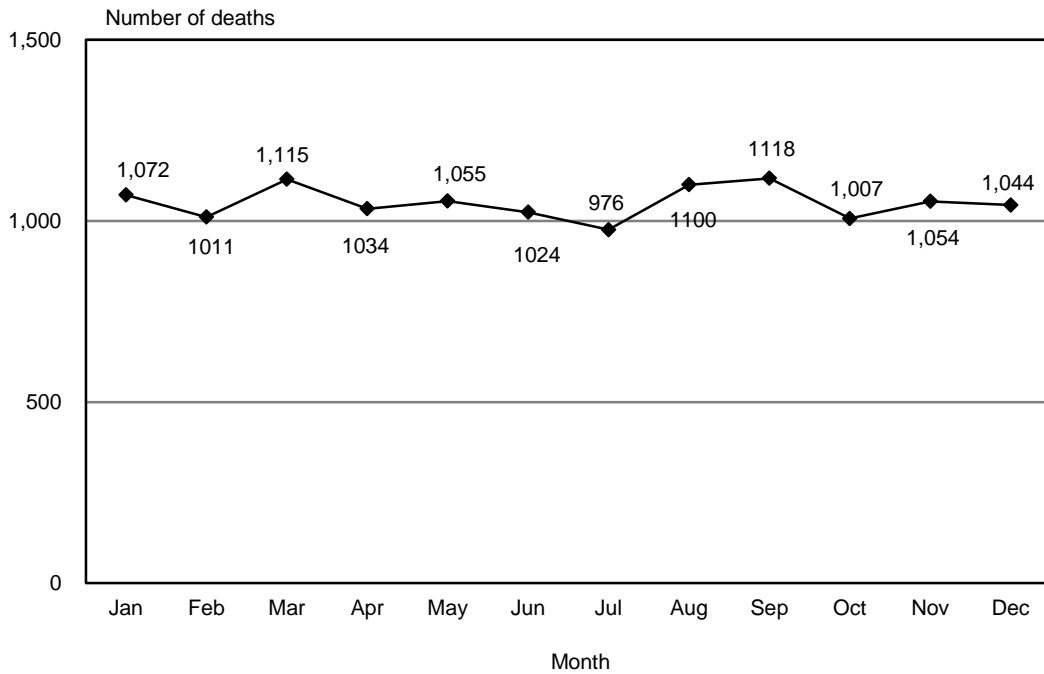

Oldest Age at Death to Idaho Males and Females

In 2014, the age of the oldest male at death was 105 (3 deaths), and the age of the oldest female at death was 108 (2 deaths).

1. Centers for Disease Control and Prevention, National Center for Health Statistics. Underlying Cause of Death 1999-2014 on CDC WONDER Online Database, released 2015.

2. Significance based on 95-percent confidence interval.

1. Race and Hispanic origin are reported separately on death certificate; people of Hispanic origin are included in appropriate race totals.
Note: Beginning in 2003, multiple races and Hispanic origins may be reported on the Idaho death certificate. For decedents with multiple races, the races were bridged to a single race category.

All other causes	2,795	22.2%	NA	NA	NA	NA

1. Rates are per 100,000 population.

2. Age-adjusted rates are artificial measures developed to eliminate the bias inherent in differing age compositions, thus allowing comparisons between geographic regions. Idaho and U.S. age-adjusted rates were calculated using the 2000 U.S. population estimate as the standard population.

3. Idaho rates are based on the July 1, 2014 population estimates.

4. U.S. crude and age-adjusted rates are 2014 final for leading causes of death. Source: Centers for Disease Control and Prevention, National Center for Health Statistics. Underlying Cause of Death 1999-2014 on CDC WONDER Online Database, released 2015.

NA: Age-adjusted rates not calculated for causes with fewer than 20 deaths; crude and age-adjusted rates not applicable for all other causes.

Malignant neoplasm death rate: Number of deaths per 100,000 population.

1. Total breast cancer deaths and rates (see table for Malignant neoplasm deaths by sex for female breast cancer numbers and rates).
2. Prostate cancer death rates are expressed as the number of deaths per 100,000 male population.

*Total includes 1 death in Benewah County (District 1) with other method of disposition not shown in table.

INFANT, FETAL, AND MATERNAL MORTALITY

U.S.

The 2014 U.S. infant mortality rate decreased from 6.0 deaths per 1,000 live births in 2013 to 5.8 in 2014. The leading cause of infant death in 2014 in the U.S. was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (119.0 deaths per 100,000 live births), followed by Disorders related to short gestation and unspecified low birth weight (104.6 deaths per 100,000 live births). In 2014, there were 23,215 infant deaths in the U.S., compared with 23,440 in 2013¹.

Idaho

Idaho's infant mortality rate in 2014 was 5.5 per 1,000 live births, a 1.8 percent decrease from 5.6 per 1,000 live births in 2013. The number of infant deaths in 2014 was the same as in 2013 with 126 infant deaths. An infant death is the death of an infant under one year old.

The neonatal mortality rate (infant deaths less than 28 days) was 3.8 per 1,000 live births, a 2.7 percent increase from 3.7 per 1,000 live births in 2013. The postneonatal rate (infant deaths from 28 days through 11 months) decreased slightly from 2.0 in 2013 to 1.7 in 2014. The U.S. neonatal mortality rate was 4.0 and the postneonatal rate was 1.9 in 2013.

District 2 experienced the highest infant mortality rate in 2014 at 8.5 per 1,000 live births followed by District 1 (6.5). District 6 had the lowest rate in 2014 (4.3). Neonatal mortality ranged from a low of 1.9 deaths per 1,000 births in District 6 to a high of 5.4 deaths per 1,000 births in District 1. Postneonatal mortality ranged from a low of 0.7 deaths per 1,000 live births in District 4 to a high of 5.9 in District 2.

Because Idaho infant deaths provide a small data base that tends to fluctuate or produce abnormally high rates in small counties, moving three-year rates have been calculated. See page 126 for three-year infant mortality rates by district and county, from 2003-2005 through 2012-2014; the overall trend is more readily apparent.

Leading Causes of Infant Death

In 2014, there were 58 Idaho resident infant deaths for the general infant death category, "Certain conditions originating in the perinatal period" compared with 63 deaths in 2013. This category includes such conditions as short gestation and low birthweight, respiratory distress of newborn and neonatal hemorrhage. In ranking the leading causes of infant deaths, however, the conditions within this general category are used to determine leading causes of death, rather than the general category. The leading cause of Idaho infant deaths was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (31 deaths; 135.4 deaths per 100,000 births). Disorders related to short gestation and unspecified low birth weight was the second leading cause of infant death (18 deaths; 78.6 deaths per 100,000 births), followed by Sudden infant death syndrome (SIDS) and Newborn affected by maternal complications of pregnancy (14 deaths each; 61.2 per 100,000 births each).

Stillbirths

Idaho reportable stillbirth deliveries are defined as a spontaneous fetal death of twenty (20) completed weeks gestation or more, based on a clinical estimate of gestation, or a weight of three hundred fifty (350) grams (12.35 ounces) or more. In 2014, there were 114 stillbirths to Idaho residents; the ratio of stillbirths to live births was 5.0 stillbirths per 1,000 live births. In the past ten years, the stillbirth ratio ranged from a low of 4.5 per 1,000 live births in 2006 to a high of 6.1 per 1,000 live births in 2011.

Perinatal Deaths Perinatal death is defined as the number of stillbirths plus the number of deaths to infants within the first six days of life per 1,000 live births. The perinatal ratio is often used to compare U.S. data with other countries because of differences in the definitions of live birth, stillbirth and infant death among countries. In 2014, there were 191 perinatal deaths to Idaho residents. The Idaho perinatal death ratio was the same in 2013 and 2014 (8.3 perinatal deaths per 1,000 live births).

Maternal Deaths Maternal causes of death include pregnancies with an abortive or live outcome and include direct and indirect obstetric causes and complications. The World Health Organization defines maternal death as “the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.”²

In 2003, the Idaho death certificate was revised to include a separate question regarding pregnancy status of females aged 10 to 54. Data are reported if female was pregnant at time of death, within 42 days of death, or 43 days to one year prior to death. Data from the response to this question are used in conjunction with cause-of-death information reported in Part I and Part II on the death certificate to determine the underlying cause of death. This separate pregnancy status question on the death certificate resulted in the identification of more maternal deaths in states with the revised death certificate². Idaho maternal death data in 2003 and later are not comparable with Idaho data prior to 2003, the U.S., or states not using the revised death certificate.

The ICD-10 codes used for determining the number of maternal deaths are A34 (Obstetric embolism), O00-O95 (Direct obstetric causes), and O98-O99 (Indirect causes). In addition, there are ICD-10 codes used for deaths due to pregnancy, childbirth, and the puerperium occurring 43 days to one year after delivery or termination of pregnancy (ICD-10 codes O96-O97); however, these deaths are not included in the count or the rate for maternal deaths. In 2014, there were three maternal deaths to Idaho residents (death rate of 13.1 deaths per 100,000 live births). There were two deaths due to pregnancy, childbirth, and the puerperium occurring 43 days to one year after delivery or termination of pregnancy. Overall from 2005 to 2014, there have been 43 maternal deaths among Idaho women.

Comparable U.S. maternal mortality data were not included in the latest U.S final data report on deaths. The 2003 revision of the U.S. Standard Certificate of Death introduced a checkbox question format with categories to take advantage of additional codes available in ICD-10 for deaths with a connection to pregnancy, childbirth, and the puerperium. As states revise their certificates, most are adopting the checkbox format, resulting in wider adoption of a pregnancy status question nationwide and greater standardization of the particular question used. As of 2010, 41 states and the District of Columbia have a separate question related to pregnancy status of female decedents around the time of their death, and one state has a prompt encouraging medical certifiers to report recent pregnancies on the death certificate. However, at least five different questions were used in the 41 states and the District of Columbia, reflecting the mix of 36 states and the District of Columbia using the 2003 standard format and five states with pre-existing questions.
