MORTALITY TECHNICAL NOTES	63

DEFINITIONS AND FORMULAS

Death

(CRUDE) DEATH RATE -- number of deaths per 1,000 population

$$\frac{\text{deaths}}{\text{population}} \times 1,000$$

CAUSE-SPECIFIC DEATH RATE -- number of deaths from a specific cause per 100,000 population

$$\frac{\text{deaths from specific cause}}{\text{population}} \times 100,000$$

AGE-ADJUSTED DEATH RATE (DIRECT METHOD) -- number of deaths per 100,000 standard population. Age-adjusted death rates are artificial measurements and should be used only to compare to other age-adjusted death rates calculated using the same standard population. Idaho and U.S. age-adjusted rates shown were calculated using the 2000 population estimate as the standard population.

$$\frac{\text{sum of (age-specific death rates per 100,000 for selected population x standard population in corresponding age groups)}}{\text{sum of standard population}}$$

Infant Death

Death of an infant under 1 year of age

INFANT MORTALITY RATE -- number of infant deaths per 1,000 live births

$$\frac{\text{infant deaths}}{\text{live births}} \times 1,000$$

Maternal Death

Death attributable to complications of pregnancy, childbirth, or the puerperium based on ICD-10 codes A34, O00-O95, and O98-O99.

MATERNAL MORTALITY RATE -- number of maternal deaths per 100,000 live births

$$\frac{\text{maternal deaths}}{\text{live births}} \times 100,000$$

Neonatal Death

Death of an infant within the first 27 days of life

NEONATAL MORTALITY RATE -- number of neonatal deaths per 1,000 live births

$$\frac{\text{neonatal deaths}}{\text{live births}} \times 1,000$$

Perinatal Death

Includes stillbirths and deaths of infants within the first 6 days of life

PERINATAL MORTALITY RATIO -- number of perinatal deaths per 1,000 live births

$$\frac{\text{perinatal deaths}}{\text{live births}} \times 1,000$$

DEFINITIONS AND FORMULAS (CONTINUED)

Postneonatal Death

Death of an infant 28 days through the first 11 months of life

POSTNEONATAL MORTALITY RATE -- number of postneonatal deaths per 1,000 live births

$$\frac{\text{Postneonatal deaths}}{\text{live births}} \times 1,000$$

Stillbirth

A spontaneous fetal death of at least 20 weeks gestation or a weight of at least 350 grams (does not include any induced abortions)

STILLBIRTH RATIO -- number of stillbirths per 1,000 live births

$$\frac{\text{stillbirths}}{\text{live births}} \times 1,000$$

U.S. Data

In this publication, there are references to preliminary and final U.S. data. If the U.S. statistics are not noted as preliminary, they are considered final. In either case, the most recent U.S. information is provided. The following definitions have been added to clarify the differences among the types of U.S. data.

U.S. Preliminary Data

Preliminary U.S. vital statistics are based on events in the 50 states and the District of Columbia. The National Center for Health Statistics believes that more than 98 percent of the deaths occurring in this country are registered through the state vital registration system. As of December 2016, the latest U.S. preliminary data available are 2011 for death¹ data.

U.S. Final Data

Final U.S. vital statistics are based on events in the 50 states and the District of Columbia. The National Center for Health Statistics believes that more than 99 percent of the births and deaths occurring in this country are registered through the state vital registration system. As of December 2016, the latest U.S. final data available are 2014 for death².

For the latest U.S. data please visit:

VITAL REGISTRATION AND DATA COLLECTION

Registration of Records

The Idaho Bureau of Vital Records and Health Statistics is responsible for managing Idaho's vital records program and for providing health statistics and analysis. Civil laws of every state provide for a continuous, permanent, and compulsory vital registration system. Idaho is responsible for inspecting each Idaho state record for promptness of filing, completeness, and accuracy of information; querying for missing or inconsistent information; numbering the records; preparing indexes; processing the records; issuing certified copies; and storing the documents for permanent reference and safekeeping.

Death and Stillbirth Certificates

Registration of deaths is a legal requirement. Death certificates are usually completed by physicians, coroners, and funeral directors. A stillbirth certificate must be filed for all spontaneous fetal deaths of at least 20 weeks gestation or with a weight of at least 350 grams.

Unless otherwise stated, death, and stillbirth data contained in this report are provided for Idaho residents, regardless of where the event occurred. There is an agreement among all registration areas in the United States for resident exchange of copies of death and stillbirth certificates. For data analysis, the cut-off date for 2015 stillbirth records was August 5, 2016 and the cut-off date for 2015 death records was July 26, 2016. Records may be sent to Idaho after these dates; they are included in the vital records mainframe database, but are not included in the databases for statistical analysis.

MORTALITY

U.S. and Idaho

The number of Idaho resident deaths increased 3.3 percent from 12,610 in 2014 to 13,031 in 2015. At the same time, the death rate increased from 7.7 to 7.9 deaths per 1,000 population. There were 2,626,418 deaths in the United States in 2014 (the last year of available data) compared with 2,596,993 in 2013. The 2014 U.S. crude death rate was 8.2 deaths per 1,000 population, which was no change from 2013¹.

U.S., IDAHO RESIDENT DEATH RATES

2005-2015

U.S. and Idaho Cause of Death Ranking

The 2015 leading cause of death in Idaho was Malignant neoplasms followed by Diseases of heart. The 2014 leading cause of death in the United States was Diseases of heart, followed by Malignant neoplasms. Leading causes of death ranked two thru seven, in the U.S in 2014 were the same as the leading causes in Idaho in 2015. Intentional self-harm (suicide) was ranked 8th in Idaho with an age-adjusted rate (AAR) of 22.3 per 100,000 population in 2015, and was ranked 10th in the U.S. in 2014 with a rate of 13.0. Chronic liver disease and cirrhosis was ranked 9th in Idaho with an age-adjusted rate (AAR) of 12.2 per 100,000 population in 2015, and was ranked 12th in the U.S. in 2014 with a rate of 10.4. Influenza and pneumonia was ranked 10th in Idaho with an age-adjusted rate (AAR) of 12.2 per 100,000 population in 2015, and was ranked 8th in the U.S. in 2014 with a rate of 15.1. Nephritis, nephrotic syndrome and nephrosis was ranked 9th in the U.S. in 2014 with an AAR of 13.2, and was ranked 12th in Idaho with an AAR of 8.7 in 2015.

**U.S. and Idaho
Cause of Death
Ranking**

Ten Leading Causes of Death Ranked by Number of Deaths

Cause of Death		Idaho 2015 Age-Adjusted Rate	U.S. 2014 Age-Adjusted Rate (Rank)
1	Malignant neoplasms (cancer)	153.3	161.2 (2)
2	Diseases of heart	156.7	167.0 (1)
3	Chronic lower respiratory diseases	46.6	40.5 (3)
4	Accidents (unintentional injuries)	44.6	40.5 (4)
5	Cerebrovascular diseases (stroke)	36.5	36.5 (5)
6	Alzheimer's disease	31.6	25.4 (6)
7	Diabetes mellitus	22.1	20.9 (7)
8	Intentional self-harm (suicide)	22.3	13.0 (10)
9	Chronic liver disease and cirrhosis	12.2	10.4 (12)
10	Influenza and pneumonia	12.2	15.1 (8)

Age-adjusted rates are per 100,000 population.

U.S. mortality rates are consistently higher than those in Idaho for Diseases of heart, Malignant neoplasms, Nephritis, nephrotic syndrome and nephrosis, and Influenza and pneumonia. While the death rate for Alzheimer's disease was lower in Idaho over the past years, the rate increased significantly² in 2015 and is now higher compared to the U.S. rate in 2014. Idaho rates were also higher for Chronic lower respiratory disease, Accidents (unintentional injury), Intentional self-harm (suicide), Chronic liver disease and cirrhosis, and Diabetes mellitus.

**Changes in
Cause-of-Death
Ranking from
2014 to 2015**

Alzheimer's disease moved from the 7th leading cause of death to the 6th leading cause of death and surpassed Diabetes mellitus. Chronic liver disease and cirrhosis moved from the 10th leading cause of death to the 9th leading cause of death and surpassed Influenza and pneumonia.

**Changes in
Idaho Age-
Adjusted
Rates²**

There was one significant change in the age-adjusted death rate among the ten leading causes of death from 2014 to 2015. The age-adjusted rate for Alzheimer's disease increased significantly from 22.4 deaths per 100,000 in 2014 (total of 376 deaths) to 31.6 deaths per 100,000 in 2015 (total of 553 deaths). The number of deaths increased by 47.1 percent and the age-adjusted rate increased by 41.1 percent.

**Changes in
Idaho Age-
Adjusted
Rates²**

<u>Cause of Death</u>	<u>Age-Adjusted Rate</u>		
	<u>2014</u>	<u>2015</u>	<u>Percent Change</u>
Alzheimer's disease	22.4	31.6	41.1 ▲
Chronic liver disease and cirrhosis	10.9	12.2	11.9 ▲
Intentional self-harm (suicide)	20.0	22.3	11.5 ▲
Influenza and pneumonia	11.5	12.2	6.1 ▲
Diseases of heart	153.4	156.6	2.1 ▲
Chronic lower respiratory diseases	46.4	46.6	0.4 ▲
Cerebrovascular diseases	36.8	36.5	-0.8 ▼
Malignant neoplasms	155.1	153.3	-1.2 ▼
Accidents (Unintentional injury)	45.5	44.6	-2.0 ▼
Diabetes mellitus	22.9	22.1	-3.5 ▼

Age-adjusted rates are per 100,000 population.

▲ Rate increased in Idaho from 2014 to 2015

▼ Rate decreased in Idaho from 2014 to 2015

**Deaths to
Idaho Males
and Females**

In 2015, the leading cause of death for males was malignant neoplasms (cancer) and diseases of heart for females. Age-adjusted rates (AAR) for males were significantly higher² than age-adjusted rates for females for six of the ten leading causes of death. For females, the age-adjusted rate for Alzheimer's disease was significantly higher than for males.

<u>Cause of Death</u>	<u>Male AAR</u>	<u>Female AAR</u>	<u>Male to Female Ratio</u>
Malignant neoplasms (cancer)	183.8	128.9	1.4
Diseases of heart	194.2	124.3	1.6
Chronic lower respiratory diseases	52.1	42.4	1.2
Accidents (Unintentional injury)	58.5	30.9	1.9
Diabetes mellitus	26.6	18.6	1.4
Intentional self-harm (suicide)	35.0	9.9	3.5
	<u>Female AAR</u>	<u>Male AAR</u>	<u>Female to Male Ratio</u>
Alzheimer's disease	34.7	27.1	1.3

Idaho Age at Death

In 2015 the average age at death was 73.7 compared with 73.4 in 2014. The average age at death varied by gender, race, ethnicity, and the cause of death.

Demographic

Average age at death

All deaths	73.7
Male	70.9
Female	76.8
White	74.0
Black	46.3
American Indian / Alaska Native	60.7
Asian / Pacific Islander	73.5
Other Race	60.3
Non-Hispanic	74.2
Hispanic	58.9

Cause of death

Average age at death

Intentional self-harm (suicide)	44.7
Accidents (Unintentional injury)	55.0
Motor vehicle accident	43.7
Accidental falls	81.7
Accidental poisoning by drugs	42.3
Chronic liver disease and cirrhosis	59.3
Diabetes mellitus	71.8
Malignant neoplasms (cancer)	72.0
Chronic lower respiratory diseases	77.5
Diseases of heart	78.7
Cerebrovascular diseases	79.7
Influenza and pneumonia	80.5
Alzheimer's disease	86.1

Age at death

Oldest male at death	106 (1 death)
Oldest female at death	106 (1 death)

Month and Day of Death

In 2015, January 31st had the highest number of Idaho resident deaths (59 deaths), while September 29th had the fewest deaths (21 deaths). January had the most deaths (1,224) and the highest average number of deaths per day (39.5). February had the lowest number of deaths (993) while August had the fewest deaths per day (32.4).

IDAHO RESIDENT DEATHS By Month of Death 2015

IDAHO RESIDENT DEATHS By Day of Death 2015

Out-of-State Resident Deaths

In 2015, 574 out-of-state residents died in Idaho. Most of these deaths were residents from neighboring states. There were 188 Washington residents, 144 Oregon residents, 35 California residents, 32 Montana residents, 32 Utah residents, 28 Nevada residents, 26 Wyoming residents, and 89 residents from another state, another country, or where the residence was unknown.

- Centers for Disease Control and Prevention, National Center for Health Statistics. Underlying Cause of Death 1999-2014 on CDC WONDER Online Database, released 2015.
- Significance based on 95-percent confidence interval.

1. Race and Hispanic origin are reported separately on death certificate; people of Hispanic origin are included in appropriate race totals.

Note: Beginning in 2003, multiple races and Hispanic origins may be reported on the Idaho death certificate. For decedents with multiple races, the races were bridged to a single race category.

IDAHO RESIDENT DEATHS

15. Septicemia	82	0.6%	5.0	12.2	4.6	10.7
All other causes	2,764	21.2%	NA	NA	NA	NA

1. Rates are per 100,000 population.

2. Age-adjusted rates are artificial measures developed to eliminate the bias inherent in differing age compositions, thus allowing comparisons between geographic regions. Idaho and U.S. age-adjusted rates were calculated using the 2000 U.S. population estimate as the standard population.

3. Idaho rates are based on the July 1, 2015 population estimates.

4. U.S. crude and age-adjusted rates are 2014 final for leading causes of death. Source: Centers for Disease Control and Prevention, the National Center for Health Statistics. Rates are calculated using the 2010 Census provided by the U.S. Bureau of the Census.

NA: crude and age-adjusted rates not applicable for all other causes.

Causes designated by the symbol # are ranked to determine the leading causes of death. Sex: T=total, F=female, and M=male.

1. Assault (homicide) by other and unspecified means and their sequelae ICD-10 codes: U01.1-U01.3, U01.5-U01.9, U02, X85-X92, X96-Y09, Y87.1.

2. Operations of war and their sequelae includes deaths due to late effects of injury of war; this category does not include Idaho resident deaths occurring overseas during military activities.

IDAHO RESIDENT DEATHS

Ten Leading Causes of Injury Deaths Highlighting Unintentional Injury Deaths by Age Group

Five Year Aggregate: 2011-2015

RANK	AGE GROUP										Total
	<1	1-4	5-9	10-14	15-24	25-34	35-44	45-54	55-64	65+	
1	Unintentional Suffocation (21)	Unintentional MV Traffic (16)	Unintentional MV Traffic (16)	Unintentional MV Traffic (17)	Unintentional MV Traffic (212)	Unintentional MV Traffic (155)	Unintentional Poisoning (174)	Unintentional Poisoning (192)	Suicide Firearm (161)	Unintentional Fall (863)	Unintentional MV Traffic (1,040)
2	Homicide Other Specified (3)	Unintentional Drowning (12)	Unintentional Drowning (7)	Suicide Firearm (15)	Suicide Firearm (135)	Unintentional Poisoning (139)	Suicide Firearm (136)	Suicide Firearm (161)	Unintentional MV Traffic (143)	Unintentional MV Traffic (212)	Unintentional Fall (1,002)
3	Homicide Not Specified (2)			Suicide Suffocation (8)	Suicide Suffocation (79)	Suicide Firearm (135)	Unintentional MV Traffic (120)	Unintentional MV Traffic (148)	Unintentional Poisoning (106)	Suicide Firearm (198)	Suicide Firearm (941)
4		Unintentional Suffocation; Unintentional Other Pedestrian;	Unintentional Other Land Transport; Unintentional Firearm; Unintentional Struck By/Against	Unintentional Other Land Transport (6)	Unintentional Poisoning (73)	Suicide Suffocation (53)	Suicide Poisoning (76)	Suicide Suffocation (75)	Unintentional Fall (76)	Unintentional Suffocation (112)	Unintentional Poisoning (728)
5	Unintentional Poisoning;	Homicide Not Specified (Tie 6 each)	(Tie 2 each)	Unintentional Suffocation (5)	Unintentional Drowning (21)	Suicide Poisoning (33)	Suicide Suffocation (51)	Suicide Poisoning (67)	Suicide Poisoning (53)	Adverse Effects (47)	Suicide Suffocation (295)
6	Unintentional Other Pedestrian; Unintentional MV Traffic;	Unintentional Fire/Flame (3)	Unintentional Suffocation; Unintentional Not Specified; Unintentional Natural Environment; Suicide Suffocation; Homicide Suffocation;	Unintentional Firearm (3)	Homicide Firearm (19)	Undetermined Poisoning (22)	Undetermined Poisoning (39)	Undetermined Poisoning (50)	Unintentional Suffocation (29)	Unintentional Poisoning (42)	Suicide Poisoning (264)
7	Homicide Poisoning; Homicide Firearm; Undetermined Suffocation (Tie 1 each)	Unintentional Machinery;		Unintentional Drowning;	Unintentional Other Transport (14)	Homicide Firearm (21)	Homicide Firearm (17)	Unintentional Fall (39)	Undetermined Poisoning (23)	Unintentional Natural/Environment (33)	Unintentional Suffocation (223)
8		Homicide Firearm (Tie 2 each)		Unintentional Fire/Flame (Tie 2 each)	Suicide Poisoning (12)	Unintentional Drowning (14)	Unintentional Fall (16)	Unintentional Suffocation (20)	Suicide Suffocation (20)	Unintentional Other Land Transport (27)	Undetermined Poisoning (151)
9		(Tie 1 each) ¹	Homicide Firearm; Homicide Not Specified; Undetermined Suffocation (Tie 1 each)	(Tie 1 each) ²	Homicide Cut/Pierce; Undetermined Poisoning (Tie 9 each)	Legal Intervention / War Firearm (9)	Unintentional Suffocation;	Unintentional Other Specified (19)	Unintentional Other Land Transport;	Unintentional Fire/Flame (25)	Unintentional Drowning (112)
10						(Tie 8 each) ³	Unintentional Other Transport (Tie 15 each)	Unintentional Other Land Transport (14)	Adverse Effects (Tie 16 each)	Suicide Poisoning (23)	Homicide Firearm (89)
Residual ⁴	0	0	0	0	71	63	90	124	127	153	830
Total	32	62	37	67	654	660	749	909	770	1,735	5,675

1. Tie at rank 9 for aged 1-4: Unintentional Unspecified; Unintentional Firearm; Unintentional Other Spec; Unintentional Other Transport; Unintentional Struck by/Against; Unintentional Natural/Environment; Homicide Other Spec; Undetermined Firearm; Undetermined NEC (1 each)
2. Tie at rank 9 for aged 10-14: Unintentional Other Transport; Unintentional Not Specified; Unintentional Other Pedestrian; Unintentional Machinery; Unintentional NEC; Unintentional Poisoning; Homicide Firearm; Undetermined Firearm; Undetermined Suffocation (1 each)
3. Tie at rank 10 for aged 25-34: Unintentional Suffocation; Unintentional Other Transport (8 each)
4. Residual: Total number of deaths for all other external causes not listed or ranked for leading cause of injury death.

Notes: manner and mechanism: "Unintentional MV traffic" is for injury involving motor vehicle alone or with others (pedestrian, pedal cyclist, other vehicle) in traffic, on a roadway. "Other transport" is for injury involving planes and boats. "Other Pedestrian" is for injury to pedestrian not in traffic or on roadway. "Other land transport" is for injury involving ATVs, off-road motorcycles, horses not in traffic or on a roadway. "Homicide not specified" is for injury that is not specific such as "blunt force trauma". "Suffocation" includes hanging. Poisoning includes drugs and non-drugs such as carbon monoxide. "Other specified" is for deaths due to a prior injury and all other specified injury. "Adverse effects" is injury involving surgery and/or infection due to surgery. "Envir" is short for Environment. "NEC" is short for not elsewhere categorized.

IDAHO RESIDENT DEATHS
Accidental (Unintentional Injury) Deaths in Descending Order by Place of Injury
2014-2015

TYPE OF ACCIDENTAL (UNINTENTIONAL INJURY) DEATH	2015 TOTAL	PLACE OF INJURY ¹					2014 TOTAL
		Home	Residential or public institution	Street or Highway	Other Public Place	Place of Injury Not Stated

INFANT, FETAL, AND MATERNAL MORTALITY

U.S.

In 2014, the last year of available data, the U.S. infant mortality rate decreased from 6.0 deaths per 1,000 live births in 2013 to 5.8 in 2014. The leading cause of infant death in 2014 in the U.S. was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (119.0 deaths per 100,000 live births), followed by Disorders related to short gestation and unspecified low birth weight (104.6 deaths per 100,000 live births). In 2014, there were 23,215 infant deaths in the U.S., compared with 23,440 in 2013¹.

Idaho

Idaho's infant mortality rate in 2015 was 4.6 per 1,000 live births, a 16.4 percent decrease from 5.5 per 1,000 live births in 2014. The number of infant deaths in 2015 was 106. An infant death is the death of an infant under one year old.

**U.S., IDAHO INFANT DEATH RATES
2005-2015**

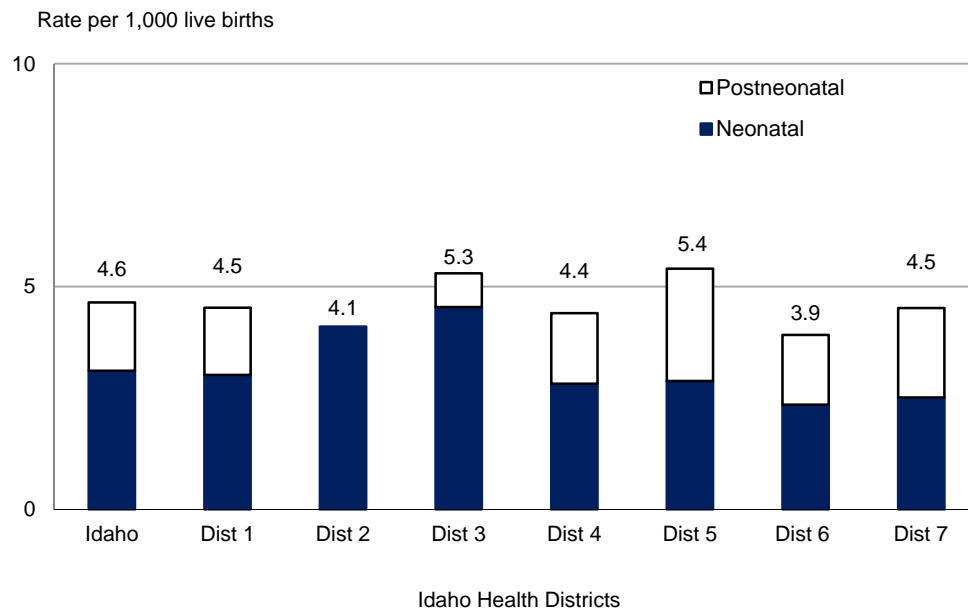

The neonatal mortality rate (infant deaths less than 28 days) was 3.1 per 1,000 live births, an 18.4 percent decrease from 3.8 per 1,000 live births in 2014. The postneonatal rate (infant deaths from 28 days through 11 months) decreased 11.8 percent, from 1.7 deaths per 1,000 live births in 2014 to 1.5 in 2015. The U.S. neonatal mortality rate was 3.9 and the postneonatal rate was 1.9 in 2014.

District 5 experienced the highest infant mortality rate in 2015 at 5.4 per 1,000 live births followed by District 3 (5.3). District 6 had the lowest rate in 2015 (3.9). Neonatal mortality ranged from a low of 2.3 deaths per 1,000 births in District 6 to a high of 4.5 deaths per 1,000 births in District 3. Postneonatal mortality ranged from a low of zero deaths per 1,000 live births in District 2 to a high of 2.5 in District 5.

Because Idaho infant deaths provide a small data base that tends to fluctuate or produce abnormally high rates in small counties, moving three-year rates have been calculated. Three-year infant mortality rates by district and county, from 2004-2006 through 2013-2015; the overall trend is more readily apparent.

IDAHO, DISTRICT INFANT DEATH RATES Neonatal and Postneonatal 2015

In 2015, there were 42 Idaho resident infant deaths for the general infant death category, "Certain conditions originating in the perinatal period" compared with 58 deaths in 2014. This category includes such conditions as short gestation and low birthweight, respiratory distress of newborn and neonatal hemorrhage. In ranking the leading causes of infant deaths, however, the conditions within this general category are used to determine leading causes of death, rather than the general category. The leading cause of Idaho infant deaths was Congenital malformations, deformations and chromosomal abnormalities (birth defects) (35 deaths; 153.3 deaths per 100,000 births). Disorders related to short gestation and unspecified low birth weight, and Sudden infant death syndrome (SIDS) was the second leading cause of infant death (9 deaths each; 39.4 deaths per 100,000 births), followed by Newborn affected by maternal complications of pregnancy (8 deaths; 35.0 per 100,000 births each).

Stillbirths

Idaho reportable stillbirth deliveries are defined as a spontaneous fetal death of twenty (20) completed weeks gestation or more, based on a clinical estimate of gestation, or a weight of three hundred fifty (350) grams (12.35 ounces) or more. In 2015, there were 142 stillbirths to Idaho residents; the ratio of stillbirths to live births was 6.2 stillbirths per 1,000 live births. In the past ten years, the stillbirth ratio ranged from a low of 4.5 per 1,000 live births in 2006 to a high of 6.2 per 1,000 live births in 2015.

Perinatal Deaths

Perinatal death is defined as the number of stillbirths plus the number of deaths to infants within the first six days of life per 1,000 live births. The perinatal ratio is often used to compare U.S. data with other countries because of differences in the definitions of live birth, stillbirth and infant death among countries. In 2015, there were 203 perinatal deaths to Idaho residents. The Idaho perinatal death ratio in 2015 was 8.9 deaths per 1,000 live births. This was slightly higher than the 2014 ratio (8.3).

Maternal Deaths Maternal causes of death include pregnancies with an abortive or live outcome and include direct and indirect obstetric causes and complications. The World Health Organization defines maternal death as “the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.”²

In 2003, the Idaho death certificate was revised to include a separate question regarding pregnancy status of females aged 10 to 54. Data are reported if female was pregnant at time of death, within 42 days of death, or 43 days to one year prior to death. Data from the response to this question are used in conjunction with cause-of-death information reported in Part I and Part II on the death certificate to determine the underlying cause of death. This separate pregnancy status question on the death certificate resulted in the identification of more maternal deaths in states with the revised death certificate². Idaho maternal death data in 2003 and later are not comparable with Idaho data prior to 2003, the U.S., or states not using the revised death certificate.

The ICD-10 codes used for determining the number of maternal deaths are A34 (Obstetric embolism), O00-O95 (Direct obstetric causes), and O98-O99 (Indirect causes). In addition, there are ICD-10 codes used for deaths due to pregnancy, childbirth, and the puerperium occurring 43 days to one year after delivery or termination of pregnancy (ICD-10 codes O96-O97); however, these deaths are not included in the count or the rate for maternal deaths. In 2015, there were eight maternal deaths to Idaho residents (death rate of 35.0 deaths per 100,000 live births). There were two deaths due to pregnancy, childbirth, and the puerperium occurring 43 days to one year after delivery or termination of pregnancy. Overall from 2006 to 2015, there have been 45 maternal deaths among Idaho women.

Comparable U.S. maternal mortality data were not included in the latest U.S. final data report on deaths. The 2003 revision of the U.S. Standard Certificate of Death introduced a checkbox question format with categories to take advantage of additional codes available in ICD-10 for deaths with a connection to pregnancy, childbirth, and the puerperium. As states revise their death certificates, most are adopting the checkbox format, resulting in wider adoption of a pregnancy status question nationwide and greater standardization of the particular question used. In 2014, the District of Columbia and all states except Colorado and West Virginia had a separate question related to pregnancy status of female decedents around the time of their death. The 2003 standard format of the question was used by 45 states and the District of Columbia. Other formats of the question were used by Alabama, California, and Maryland for the entire year and Virginia until November when they began using the 2003 standard format.

TECHNICAL NOTES

Mortality

Race of Decedent

Beginning in 2003, Idaho Vital Statistics transmitted Idaho death records to NCHS, NCHS re-coded multiple-race categories to single-race codes; NCHS returned the records back to Idaho for analysis. The data used for analysis was the “bridged-multiple race” code on each death certificate. The bridging procedure is similar to the procedure used to bridge multiracial population estimates. For Idaho death certificates, multiracial decedents are imputed to a single race using a coding algorithm according to their combination of races, Hispanic origin, sex, and age indicated on the death certificate. The categories for the bridged race codes are the four main categories used by NCHS – White, Black, American Indian or Alaska Native, Asian or Pacific Islander. In addition, there is a fifth category in Idaho for “other race of decedent”.

The imputation of multiple-race to single-race procedure is described at the CDC’s website at: <http://www.cdc.gov/nchs/about/major/dvs/popbridge/popbridge.htm>. Idaho was one of the first states to adopt a new death certificate in 2003; however, not all states adopted multiple-race options in 2003. In 2003, all records received by Idaho Vital Statistics for Idahoans who died out of state reported single-race. There were four out-of-state death certificates with multiple races of decedent reported in 2015. Bridged-race codes are not provided to Idaho for out-of-state records; therefore not all Idaho resident records have bridged-race codes to be used for data analysis. Idaho resident death data by race are based on single-race and bridged-race categories for deaths in Idaho and single-race categories for deaths out of state.

Year	Idaho Resident Deaths in Idaho			Idaho Resident Deaths Out of State		
	Total	Single Race	Multiple Race	Total	Single Race	Multiple Race
2013	11,859	11,816	43	567	561	6
2014	12,020	11,968	52	590	587	3
2015	12,419	12,367	52	612	608	4

Other Race

Prior to 2003, decedent’s race was a write-in response on the death certificate. Races listed on the certificate were collapsed into five race categories: White, Black, American Indian or Alaskan Native, Asian or Pacific Islander, or “other race”. With the change to check boxes on the certificates and the ability to select one or more race, the race category structure was revised. Prior to use of check boxes, if the term “Hispanic” or “Mexican” was written on the certificate as race, then race was coded to white. Beginning in 2003, if the check box “other race” was checked and the write-in for other race was specified as “Hispanic” or “Mexican”, then race was coded to “other race”. Therefore, race data for deaths in 2003 and after are not comparable with race data prior to 2003. Data for white, non-Hispanic persons are available upon request; these data are comparable for years prior to 2003 to present.

Other Race Prior to 2003, the number of deaths categorized as “other race” was historically low. For example, in 2002, there were four residents deaths reported as “other race”. Due to the change in the methodology, the number of records with “other race” of decedent was 65 in 2013, 76 in 2014, and 72 in 2015.

Cause-of-Death Mortality statistics are compiled in accordance with the World Health Organization (WHO) regulations, which specify that member nations, including the United States, classify and code causes of death in accordance with the International Statistical Classification of Diseases and Related Health Problems. The tenth revision of the International Classification of Diseases (ICD-10) was implemented in the United States beginning with deaths occurring in 1999 and replaces the ninth revision of the ICD (ICD-9), which was used from 1979 through 1998. Some changes from ICD-9 to ICD-10 include:

1. ICD-10 is far more detailed, with about 8,000 categories compared with 4,000 categories in ICD-9.
2. ICD-10 uses 4-digit alphanumeric codes, compared to 4-digit numeric codes in ICD-9.
3. Some cause-of-death titles have been changed, and conditions have been regrouped.
4. Some cause-of-death coding rules have been changed.

Mortality Rates Age Adjusted to the Year 2000 U.S. Standard Age adjustment is a statistical technique used to standardize rates. The technique is employed when comparing two or more populations with different age distributions. Age-adjusted rates are artificial measures for comparison purposes only and should not be used to measure the absolute magnitude of a health issue. To allow for comparison, the same standard population must be used. If different standard populations are used to compute the age-adjusted rates (1940 and 2000, for example), then the age-adjusted rates are NOT comparable. Statistically, it is a weighted average of the age-specific death rates, where the weights represent the fixed population proportions by age.

There are two methods for age-adjusting rates: direct and indirect. In this report, Idaho age-adjusted rates were developed using the following steps for the direct method:

- 1) Calculate **age-specific rates** for the 11 age groups used in the 2000 standard million: less than 1, 1-4, 5-14, 15-24, 25-34, 35-44, 45-54, 55-64, 65-74, 75-84, and 85 and older.
$$\frac{\text{(Annual number of deaths in age group)}}{\text{(Population of age group for corresponding year)}}$$
- 2) Calculate **expected number of deaths** for each age group.
$$\text{(2000 U.S. standard million population of age group)} \times \text{(Age-specific rate)}$$
- 3) Calculate **total expected number of deaths**.
$$\text{(Sum of expected deaths for all age groups)}$$
- 4) Calculate **age-adjusted rate per 100,000 persons**.
$$\frac{\text{(Total expected deaths)}}{\text{(Standard million)}} \times 100,000$$

**Mortality Rates
Age Adjusted
to the Year 2000
U.S. Standard**

YEAR 2000 U.S. STANDARD POPULATION			
All ages	1,000,000	35-44 years	162,613
Under 1 year	13,818	45-54 years	134,834
1-4 years	55,317	55-64 years	87,247
5-14 years	145,565	65-74 years	66,037
15-24 years	138,646	75-84 years	44,842
25-34 years	135,573	85+ years	15,508

Life Expectancy Data used to calculate Idaho life expectancy are based on July 1, 2005, population estimates from the U.S. Bureau of the Census, age-specific population estimates computed by the Bureau of Vital Records and Health Statistics, and 2005 Idaho resident mortality rates. Average number of years of life remaining (0e_x) is the expectation of life for those who survived to age x.

$${}^0e_x = T_x / l_x$$

T_x is the total time lived beyond age x by all individuals of the life table proportion alive at age x; l_x is the number of persons who survive to the exact age marking the beginning of each age interval. The number alive at age 0 (l_0) is taken arbitrarily as 100,000.

**Years of
Potential Life
Lost (YPLL)**

Years of potential life lost (YPLL) is a statistic used to measure the number of years of life lost in a population when persons in that population die prematurely. YPLL provides valuable information regarding the causes of death that contribute most significantly to premature mortality. For example, in 2015 Accidents was the fourth-leading cause of death of Idahoans and accounted for 5.7 percent of all resident deaths. However, Accidents was the second-leading cause of premature death under age 75 and accounted for 9.7 percent of all deaths to persons under the age of 75 in 2015. In order to calculate YPLL, a standard must be chosen (e.g., age 75) as a reference point for years of life lost. The number of years of life lost is then calculated for each person dying before the standard age. Assume a standard of 75 years of age is chosen. For calculation purposes, all people are considered half way through the year of their age at death. For example, an infant who dies under one year of age is considered .5 years of age at death, and a child who dies at age one - between its first and second birthday - is considered 1.5 years of age, and so forth. Therefore, a person dying at 39 has lost 35.5 years of life relative to the standard (i.e., 75 years – 39.5 years = 35.5 years). To obtain YPLL, the number of years of life lost for each person in the population dying before the standard age is summed.

Persons dying at 75 years of age or older would be excluded from the analysis, because they have not lost years of life relative to the standard. For this report, a standard of 75 years of age was chosen to calculate YPLL.

**Firearm Injury,
Drug-Induced,
and Alcohol-
Induced Deaths**

Deaths attributed to firearm injury, alcohol-induced, and drug-induced causes are sub-sets of mortality categories used to rank leading causes of death such as accidents, intentional self-harm (suicide), and assault (homicide). Firearm injury, alcohol-induced, and drug-induced deaths are not used to rank leading cause of death.

Alcohol-Induced The list of ICD-10 codes included in alcohol-induced causes was expanded in 2003 to include the ICD-10 codes of E24.4, G72.1, and K86.0 with the codes used prior to 2003: F10, G31.2, G62.1, I42.6, K29.2, K70, R78.0, X45, X65, and Y15. In 2006, the list was expanded again to include ICD-10 code K85.2. Alcohol-induced deaths include mental and behavioral disorders due to alcohol use; degeneration of nervous system due to alcohol; alcoholic polyneuropathy; alcoholic cardiomyopathy; alcoholic gastritis; alcoholic liver disease; alcohol-induced chronic pancreatitis; alcohol-induced acute pancreatitis; findings of alcohol in blood; accidental poisoning by and exposure to alcohol; intentional self-poisoning (suicide) by exposure to alcohol; poisoning by exposure to alcohol; and poisoning by exposure to alcohol, undetermined intent. Alcohol-induced deaths do not include homicides, accidents such as falls and motor vehicle crashes, and other causes indirectly related to alcohol use. This category also excludes newborn deaths associated with maternal alcohol use.

Drug-Induced In 2003 and 2006, NCHS expanded the list of ICD-10 codes for drug-induced causes to be more comprehensive. Drug-induced ICD-10 codes include: D52.1, D59.0, D59.2, D61.1, D64.2, E06.4, E16.0, E23.1, E24.2, E27.3, E66.1, F11.0-F11.5, F11.7-F11.9, F12.0-F12.5, F12.7-F12.9, F13.0-F13.5, F13.7-F13.9, F14.0-F14.5, F14.7-F14.9, F15.0-F15.5, F15.7-F15.9, F16.0- F16.5, F16.7-F16.9, F17.0, F17.3-F17.5, F17.7-F17.9, F18.0-F18.5, F18.7-F18.9, F19.0-F19.5, F19.7-F19.9, G21.1, G24.0, G25.1, G25.4, G25.6, G44.4, G62.0, G72.0, I95.2, J70.2-J70.4, K85.3, L10.5, L27.0, L27.1, M10.2, M32.0, M80.4, M81.4, M83.5, M87.1, R50.2, R78.1- R78.5, X40-X44, X60-X64, X85, and Y10-Y14. Drug-induced deaths include deaths due to drug psychosis; drug dependence; nondependent use of drugs not including alcohol and tobacco; drug-induced pancreatitis; drug-induced fever; accidental poisoning by drugs, medicaments, and biologicals; suicide by drugs, medicaments, and biologicals; assault from poisoning by drugs and medicaments; and poisoning by drugs, medicaments, and biologicals, undetermined whether accidental or purposely inflicted. Drug-induced deaths do not include accidents, homicides, and other causes indirectly related to drug use. Also excluded are newborn deaths associated with maternal drug use. Types of drugs listed on the death certificate include prescriptions, over-the-counter drugs, and narcotics.

Population

Race The Office of Management and Budget announced revisions to the standards for classification of federal data on race and ethnicity on October 30, 1997. These standards require that agencies offer individuals the opportunity to select one or more races when reporting information on race in federal data collections. The Census in 2000 was the first nationwide implementation of the revised standards.

The files released from the U.S. Census Bureau for April 1, 2010 Census contain data for single race categories (including “other race” category) and multiple race categories. This presents problems for vital rates from two standpoints. First, the file contains counts of persons with more than one race and therefore is not compatible with states’ vital statistics numerators based on single race categories; second, the file contains the “other race” category that is not used to calculate national vital statistics rates. For U.S. vital statistics, “other race” is allocated to the four main race categories.

Race

Standard Race Categories on April 1, 2010 Census for Idaho		
Race	Number	Percent
Total	1,567,582	100.0%
White	1,396,487	89.1%
Black	9,810	0.6%
American Indian/Alaska Native	21,441	1.4%
Asian	19,069	1.2%
Native Hawaiian/Pacific Islander	2,317	0.1%
Some other race	79,523	5.1%
Two or more races	38,935	2.5%

NCHS contracted with the Census Bureau to produce a bridged data set in which all multiple race persons are allocated to a single race, to reproduce what these people would have reported had they not had the option to report more than one race. On June 28, 2016, NCHS released state and county population totals for July 1, 2015. These totals are for the four race groups (White, Black, American Indian or Alaska Native, Asian or Pacific Islander) by single year of age, sex, and Hispanic origin¹.

Race	April 1, 2010		July 1, 2014		July 1, 2015	
	Number	Percent	Number	Percent	Number	Percent
Total	1,567,582	100.0%	1,634,464	100.0%	1,654,930	100.0%
White	1,496,784	95.5%	1,532,607	95.0%	1,570,040	94.9%
Black	15,104	1.0%	18,928	1.2%	19,519	1.2%
American Indian/ Alaska Native	29,801	1.9%	32,662	2.0%	33,410	2.0%
Asian/Pacific Islander	25,893	1.7%	30,267	1.9%	31,961	1.9%

1. The bridged-race population estimates were produced by the Population Estimates Program of the U.S. Census Bureau in collaboration with the National Center for Health Statistics (NCHS). These estimates were released on June 28, 2016. Available at: http://www.cdc.gov/nchs/nvss/bridged_race/data_documentation.htm
